**Patient Information
 Findings**

Distraction Index (DI): Right DI = 0.27, Left DI = 0.23. Osteoarthritis (OA): No radiographic evidence of OA for either hip. Cavitation/Other Findings: None. Distraction Index (DI): Right DI = 0.27, Left DI = 0.23. Osteoarthritis (OA): No radiographic evidence of OA for either hip. Cavitation/Other Findings: None.
--

**Findings
 Interpretation**

Distraction Index (DI): The laxity ranking is based on the hip with the greater laxity (larger DI). In this case the DI used is 0.27. OA Risk Category: The DI is less than or equal to 0.30. This patient is at minimal risk for hip OA. Distraction Index Chart:

LABRADOODLE

Breed Statistics: This interpretation is based on a cross-section of 5798 canine patients of the LABRADOODLE breed in the AIS PennHIP database. The gray strip represents the central 90% range of DIs (0.32 - 0.77) for the breed. The breed average DI is 0.51 (solid square). The patient DI is the solid circle (0.27).

Summary: The degree of laxity (DI = 0.27) ranks the hip within the tightest 5% of DIs for the breed. This amount of hip laxity places the hip at a minimal risk to develop hip OA. No radiographic evidence of OA for either hip.

Interpretation and Recommendations: No OA/Minimal Risk: Unlikely to show radiographic evidence of hip OA; even more unlikely to develop clinical signs of hip dysplasia. **Recommendations:** Normal to strenuous activity is permitted. Keep lean: try to maintain BCS at 5/9 for a longer and healthier life.

Breeding Recommendations: Please Consult the PennHIP Manual.
